### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael Rehtin on 3/11/2009.

The application has been amended as follows:

1. In claim 1 line 4, please replace "lease" with --least--.
2. In claim 13 line 2, please replace "reactor" with --device--.
3. At the beginning of the Specification, please insert the following:

--This application is the U.S. national phase of PCT Application No. PCT/GB05/00483 filed on 02/11/2005, which claims priority under 35 USC 119 to British Patent Application No. 0402963.3 filed on 02/11/2004, the contents of which are herein incorporated by reference in their entirety.--.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

1. Independent claim 1 and the claims dependent thereon have been allowed because none of the references of record teach or suggest a counter current mixing reactor for continuously mixing two or more fluids of differing densities comprising a first inlet and an outlet characterized in that one or more further inlets are diametrically

opposed to said first inlet and are disposed within said outlet, wherein at least one of said fluids is in the subcritical, near critical or supercritical state.

2. Independent claim 8 and the claims dependent thereon have been allowed because none of the references of record teach or suggest a process for preparing metal or metal oxide nanoparticles which comprises delivery of a metal salt solution through a first inlet of a counter current mixing reactor for continuously mixing two or more fluids of differing densities, which comprises a first inlet and an outlet characterized in that one or more further inlets are diametrically opposed to said first inlet and are disposed within said outlet, wherein at least one of said fluids is in the subcritical, near critical or supercritical state.

3. Independent claim 11 and the claims dependent thereon have been allowed because none of the references of record teach or suggest a device capable of mixing two fluids of differing densities having a downwardly facing outlet for less dense fluid and an inlet for more dense fluid adapted to cause an upwards flow of said more dense fluid in use, the arrangement being such that said less dense fluid is introduceable into the device in a downwards orientation relative to the upwards flow of said denser fluid.

4. Independent claim 14 and the claims dependent thereon have been allowed because none of the references of record teach or suggest a method of mixing two fluids of different densities comprising providing a device with a downwardly facing outlet for process flow of less dense fluid, providing an inlet for processing of a more dense fluid and the device causing an upward flow of said more dense fluid, and

introducing said less dense fluid into the device in a downwards orientation relative to the upwards flow of said more dense fluid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

1. Buchholz (DE 203 06 915 U1) does not disclose that one or more inlets are disposed within an outlet or that at least one of the fluids is in the subcritical, near critical or supercritical state.
2. Kawai et al. (EP 1 358 931 A2) do not disclose that the inlets are diametrically opposed.
3. Hanson (U.S. Patent No. 2,692,764) does not disclose an inlet disposed within an outlet or that one of the fluids is in the subcritical, near critical or supercritical state.
4. Hanna et al. (U.S. Patent No. 6,440,337 B1) do not disclose the inlets disposed within the outlets.

Claims 1-21 have been allowed.
